Report on World Earth Day celebration on 27.04.2023

Place – Milli Al- Ameen College (For Girls)

Date – 27.04.2023

On 27.04.2023, Milli Al-Ameen College (For Girls) in collaboration with IQAC celebrated **‘World Earth Day 2023’** organized by Departments of Science, Education and Geography.

The theme of the World Earth Day 2023 was **‘Invest in our Planet’**. Investing in our planet would necessarily signify taking actions that can make our planet and its environment healthier. The major reason why our planet and its environment is suffering every moment is Environmental pollution. In this age of industrialization, companies , factories contribute to almost every kind of pollution that has been affecting the environment. Even considering from the economic perspective, we cannot deny the fact that our future generations will be deprived of a healthy planet to live in. Based on the aforementioned facts, Departments of Science , Education and Geography organized a intra college debate competition. The motion of the debate was **“Should companies be held accountable for their environmental impact?”** The students from various departments and the teachers of the college participated in the debate program.

The purpose of the debate competition was to improve speaking and listening skills to building self-esteem and rounded knowledge of a specific subject or topic as debating remains an important aspect of many educational systems, both in the classroom and university settings. The art of debate offers numerous benefits for students, equipping them with essential skills for the modern world. In an era where persuasion and oratory skills hold sway, the ability to understand and empathise with opposing viewpoints is crucial. Debates also help students building confidence in public speaking, constructing logical arguments, and, most importantly, listening to and responding to others' arguments with precision.

In this debate competition, students vocalized their opinion about the motion. They were given some time to prepare their points and then finally they were called in alternate sequence (favour and against) to speak. Total 7 students participated in the debate competition, 4 spoke in favour of the motion and 3 students spoke against the motion. Saika Rafique of 6th Sem Science secured 1st position defending the motion of the debate. The different points that came up from

the students were thought provoking but still after considering all the points in favour and against the motion, the motion of the house was established with quite a clear lineage.

Altogether, at the end, what came as a unanimous opinion that industrial progress should be under some regulations that should be made keeping in mind the sustainability of our environment.
